EDUCATION

G M Institute of Technology, VTU B.E. in Artificial Intelligence and Machine Learning First Class with Distinction	2022–2025 CGPA: 8.53/10
Jain Polytechnic Diploma in Computer Science and Engineering	2019–2022 82.3%

RESEARCH INTERESTS

- Interested in exploring Generative AI, Large Language Models (LLMs), and AI agents, particularly how intelligent systems can understand information, reason over complex tasks, and support human decision-making.
- Current interests center on Retrieval-Augmented Generation (RAG), agentic AI systems, Machine Learning, and Deep Learning, with a focus on building reliable AI applications that combine information retrieval, reasoning, and adaptive task execution.
- Long-term goal: developing intelligent, reliable, and human-centered AI systems that integrate generative models, autonomous agents, and learning-based methods to solve complex real-world problems.

EXPERIENCE

HeavenDocs – AI-Powered Property Document Verification Startup <i>Junior ML Engineer</i>	Nov 2025–Present
• Develop AI/ML workflows for processing and verifying complex, unstructured property documents. • Apply OCR, NLP, and information-extraction techniques to organize information for human verification. • Develop workflows for detecting inconsistencies and supporting cross-document verification and decision-making. • Contribute to AI-driven workflow orchestration for multi-stage document processing and verification.	
Sookshmas E-Learning Pvt. Ltd. <i>Java Full Stack Developer Intern</i>	Feb 2025–May 2025
• Developed application components using Java and web technologies across frontend and backend modules. • Integrated APIs and managed application data flow between different components. • Debugged and tested application modules to improve functionality and reliability.	
Karunadu Technologies <i>AI & ML Intern</i>	Nov 2023–Dec 2023
• Worked on data preprocessing, exploratory data analysis, and machine-learning workflows. • Implemented and evaluated supervised machine-learning models for prediction tasks. • Used Python-based tools to analyse datasets and evaluate model performance.	

SELECTED PROJECTS

AI-Agentic Property Document Verification	2026–Present
• Built an AI-driven document verification workflow for handling complex and unstructured property records. • Applied OCR, NLP, and information-extraction methods to transform heterogeneous documents into structured, review-ready information. • Orchestrated multi-stage verification to detect inconsistencies and validate information across related documents. • Generated structured verification results to assist human reviewers in analysing complex document-based cases.	
Zivacares – Digital Healthcare Platform	2026–Present
• Developing a scalable digital healthcare platform that connects patients, hospitals, and care services through integrated technology workflows. • Designing end-to-end patient and hospital workflows with a focus on user experience, accessibility, and efficient healthcare service coordination. • Developing an AI-powered assistant to help patients navigate healthcare services and access relevant information across the platform. • Preparing the platform for multi-city deployment through scalable frontend, dashboard, and service workflows.	

Automated Notes Maker from Audio Recording

2025

- Developed an automated system that converts recorded audio into structured and readable notes.
- Integrated speech-to-text and NLP techniques to extract and organize meaningful information.
- Supported multilingual processing across 30 languages.

TECHNICAL SKILLS

NLP & AI: NLP, Large Language Models, Generative AI, Speech Processing, Speech-to-Text

Document Intelligence: OCR, Information Extraction, Document Processing, Text Analysis

AI Systems: Workflow Automation, Agentic Workflows, Task Orchestration

Machine Learning: scikit-learn, Supervised Learning, Classification, Feature Engineering

Deep Learning: PyTorch, TensorFlow, Keras, CNN, Computer Vision

Programming: Python, Java, JavaScript, C++, SQL

Web Development: ReactJS, Next.js, Node.js, FastAPI, Flask, HTML, CSS

Databases: MySQL, PostgreSQL

Libraries & Tools: NumPy, Pandas, OpenCV, VS Code, Google Colab, Figma, Git

CERTIFICATIONS & TRAINING

Machine Learning and AI Internship – Karunadu Technologies, 2023

AWS Cloud Architect Virtual Experience – Forage

Tata GenAI: Powering Data Analytics Simulation – Forage

Cyber Security using Python & Ethical Hacking – Sirintel Technologies Pvt. Ltd., 2022

Embedded Systems, Arduino & AI Drone Training – 2022

VOLUNTEER EXPERIENCE

Sevamarga Foundation

Volunteer

- Supported the foundation's community initiatives through digital and creative contributions.
- Translated ideas and community initiatives into clear, visually engaging digital communication materials.
- Contributed to the design and visual development of outreach content used to communicate the foundation's work.
- Provided technical and creative assistance in developing digital materials for events, campaigns, and organizational activities.

LANGUAGES

English, Hindi, Kannada, Urdu
